### **Restriction/Election Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claim 1, drawn to a method of improving the pharmacological activity of a drug; classified in class 702, subclass 19.
- II. Claim 2, drawn to oligonucleotides, classified in Class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

The inventions of Group I and Group II are independent/distinct inventions because they are directed to different subject matter. Group I is directed to a method of improving the activity of a drug that ends up identifying a group of expressed amino acid sequences, but Group II is directed to the oligonucleotides that encode such amino acid sequences. Since the sequences of the amino acids and the oligonucleotides are unknown, the two inventions are completely separate. Additionally, a method of improving the activity of a drug and oligonucleotides have been most commonly separately characterized and published in the biochemical literature, thus significantly adding to the search burden if examined together as compared to being searched separately. Thus, Groups I and II are independent and/or distinct invention types for restriction purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).
